

Feature Development & Product Expansion Program

تحويل SANAD من منصة أساسية جاهزة للإنتاج
إلى منصة أعمال متكاملة قادرة على المنافسة
التجارية الفعلية

Eight-phase roadmap transforming SANAD from a production-ready platform into a comprehensive, market-competitive enterprise business suite with AI-powered capabilities across CRM, ERP, HRM, Accounting, Ecommerce, POS, AI Productization, and Analytics.

DATE

June 2026

OVERVIEW

Program Objective

SANAD-FDP-001 defines the complete feature development and product expansion roadmap that transforms the SANAD platform from a production-ready enterprise operating system into a fully integrated, AI-powered business suite capable of competing in the commercial enterprise software market. The program spans eight phases, each targeting a core business domain with new modules, AI assistants, and advanced analytics capabilities.

The program objective is driven by market demand for unified business platforms that eliminate the need for multiple disconnected SaaS tools. SANAD's multi-tenant architecture, RBAC framework, and production-hardened infrastructure provide the ideal foundation for rapid module expansion. Each phase builds on the platform's existing capabilities, ensuring that new features integrate natively with the core system rather than operating as standalone add-ons.

PROGRAM VISION

SANAD Enterprise Suite v1.5

A unified, AI-augmented business operating system that delivers CRM, ERP, HRM, Accounting, Ecommerce, POS, and Analytics in a single multi-tenant platform — eliminating integration complexity and empowering organizations with intelligent automation across every business function.

Eight-Phase Roadmap

PHASE 1

CRM Expansion

From operational CRM to intelligent revenue engine

The CRM expansion transforms SANAD's current operational CRM — which handles contacts, companies, and deal tracking — into a comprehensive revenue

intelligence platform. The ten new modules address the full customer lifecycle from lead acquisition through retention, with AI-powered automation that enables sales teams to focus on high-value activities rather than administrative tasks. Each module integrates natively with the existing CRM core, ensuring that all customer data flows into a unified profile that powers every downstream capability.

New Features

Lead Scoring Engine

ML-driven scoring model that ranks leads by conversion probability based on behavioral signals, demographic data, and historical win patterns.

Sales Pipeline Analytics

Real-time pipeline visibility with velocity metrics, stage conversion rates, and forecast accuracy tracking across all sales teams.

Customer 360 Profile

Unified customer view aggregating CRM, support, billing, and engagement data into a single comprehensive profile.

Customer Timeline

Chronological activity stream capturing every touchpoint — emails, calls, meetings, support tickets, and purchases — in one timeline.

WhatsApp Integration

Bi-directional WhatsApp Business API integration for sales conversations, support interactions, and automated notifications.

Email Campaigns

Template-based email campaign builder with A/B testing, delivery scheduling, open/click tracking, and deliverability analytics.

Marketing Automation

Workflow engine for automated drip campaigns, lead nurturing sequences, and behavior-triggered communication flows.

Customer Segmentation

Dynamic segmentation based on RFM analysis, lifecycle stage, custom attributes, and AI-predicted churn risk scores.

Opportunity Forecasting

AI-powered revenue forecasting that combines pipeline data with historical patterns to predict quarterly outcomes with confidence intervals.

AI Sales Assistant

Conversational AI that suggests next best actions, drafts follow-up emails, identifies at-risk deals, and automates CRM data entry.

PHASE 2

ERP Expansion

End-to-end operational management with intelligent procurement

The ERP expansion extends SANAD's operational backbone with nine new modules covering procurement, vendor management, project financials, asset lifecycle, service delivery, contracts, budgets, and advanced inventory

intelligence. These modules close the gap between SANAD's current inventory and order management capabilities and the full ERP functionality that enterprise customers expect. The AI Procurement Assistant brings intelligent automation to sourcing decisions, vendor evaluation, and purchase optimization.

New Modules

Procurement Workflows

Multi-step approval workflows for purchase requisitions, RFQ generation, vendor comparison, and purchase order management.

Vendor Portal

Self-service portal for vendors to submit quotes, acknowledge POs, upload invoices, and track payment status.

Project Costing

Real-time project cost tracking with budget vs. actual analysis, resource cost allocation, and margin calculation.

Asset Lifecycle

Full asset management from acquisition through depreciation, maintenance scheduling, and disposal with audit trail.

Service Management

Service ticket management, SLA tracking, technician scheduling, and field service optimization for deliverable-based businesses.

Contract Management

Contract lifecycle management from drafting through negotiation, execution, renewal, and expiry with automated alerts.

Budget Planning

Departmental and project-level budget creation, approval workflows, variance tracking, and reforecasting capabilities.

Advanced Inventory Forecasting

AI-powered demand forecasting that combines historical sales data, seasonality, and supplier lead times to optimize stock levels.

AI Procurement Assistant

Intelligent agent that suggests optimal vendors, identifies cost-saving opportunities, and automates routine procurement tasks.

HRM Expansion

From people management to talent intelligence

The HRM expansion transforms SANAD's human resource capabilities from basic employee management into a comprehensive talent intelligence platform. Nine new modules cover the full employee lifecycle from recruitment through succession planning, with AI-powered features that reduce hiring time, improve performance outcomes, and provide workforce analytics that inform strategic decisions. Each module is designed to work within SANAD's multi-tenant

architecture, supporting organizations with complex team structures and cross-departmental workflows.

New Modules

Recruitment ATS

Applicant tracking system with job posting, resume parsing, candidate pipeline management, and automated screening workflows.

Interview Pipeline

Structured interview scheduling with panel coordination, scorecard templates, feedback collection, and candidate comparison views.

Performance Management

Goal setting, OKR tracking, periodic reviews, 360-degree feedback, and performance improvement plan workflows.

Learning Management System

Course creation, enrollment tracking, certification management, and compliance training with progress dashboards.

Competency Framework

Role-based competency models with skills assessment, gap analysis, and development plan recommendations.

Compensation Planning

Salary structure management, benchmarking data integration, merit increase modeling, and bonus allocation workflows.

Succession Planning

Talent pool identification, readiness assessment, development tracking, and organizational risk analysis for key positions.

Workforce Analytics

Turnover analysis, diversity metrics, hiring velocity, engagement indicators, and predictive attrition modeling.

AI HR Assistant

AI agent that drafts job descriptions, screens resumes, suggests interview questions, and answers employee policy queries.

PHASE 4

Accounting Expansion

From bookkeeping to strategic financial intelligence

The Accounting expansion elevates SANAD's financial capabilities from core bookkeeping to strategic financial management. Seven new modules address the needs of growing organizations that require multi-entity consolidation, multi-currency operations, advanced reporting, and AI-powered financial analysis. These modules integrate with the existing accounting core to provide a seamless experience from transaction entry through executive-level financial reporting,

ensuring that finance teams have the tools they need to support strategic decision-making.

New Modules

Advanced Financial Reporting

Custom report builder with P&L, balance sheet, cash flow, and trial balance variants. Support for IFRS and local GAAP formats.

Cash Flow Forecasting

AI-powered cash flow projections based on receivables aging, payables schedule, and historical patterns with scenario modeling.

Budget Management

Departmental budgets with allocation rules, actual vs. budget tracking, variance alerts, and mid-period reforecasting.

Cost Centers

Hierarchical cost center structure with expense allocation rules, inter-company transfers, and profitability analysis by segment.

Multi-Currency

Automatic exchange rate feeds, realized and unrealized gain/loss calculation, and currency-specific reporting with revaluation.

Consolidation

Multi-entity consolidation with inter-company elimination, currency translation, and group-level financial statement generation.

Financial Analytics

Ratio analysis, trend visualization, peer benchmarking, and anomaly detection across all financial data dimensions.

AI Finance Assistant

AI agent that generates financial summaries, answers ad-hoc queries, flags anomalies, and suggests optimization opportunities.

PHASE 5

Ecommerce Expansion

Unified commerce with intelligent merchandising

The Ecommerce expansion extends SANAD into the digital commerce space with eight modules that cover online store creation, marketplace connectivity, loyalty management, promotions, subscriptions, order management, and AI-powered product recommendations. These modules enable organizations to launch and scale their online sales channels while maintaining tight integration with SANAD's inventory, accounting, and CRM modules. The AI capabilities bring Amazon-level personalization and recommendation intelligence to every SANAD-powered storefront.

New Modules

Store Builder

Drag-and-drop storefront builder with customizable themes, product catalog management, SEO tools, and mobile-responsive design.

Marketplace Connector

Pre-built integrations with major marketplaces (Amazon, Noon, Shopify) for synchronized listings, inventory, and order management.

Loyalty Program

Points-based and tiered loyalty programs with earning rules, redemption catalog, and member engagement analytics.

Promotion Engine

Rule-based promotion engine supporting discounts, bundles, flash sales, coupon codes, and BOGO with scheduling and targeting.

Subscriptions

Recurring billing with plan management, usage metering, dunning workflows, and subscriber lifecycle analytics.

OMS Expansion

Advanced order management with split shipment, partial fulfillment, return/exchange workflows, and multi-warehouse routing.

AI Product Recommendation

Collaborative and content-based recommendation engine that personalizes product suggestions across storefront and email channels.

Customer Intelligence

Purchase behavior analysis, customer lifetime value prediction, churn risk scoring, and segment-specific engagement strategies.

PHASE 6

POS Expansion

Industry-specific point-of-sale with vertical intelligence

The POS expansion extends SANAD's point-of-sale capabilities from general-purpose retail transactions into industry-specific verticals. Eight new modules deliver tailored POS experiences for retail, restaurants, clinics, workshops, distribution, and field sales — each with specialized workflows, UI layouts, and KPI dashboards designed for the unique needs of that vertical. Industry templates provide pre-configured setups that enable rapid deployment, while industry KPIs deliver vertical-specific performance insights that generic POS systems cannot match.

New Modules

Retail

Fast checkout, barcode scanning, multi-tender support, customer-facing display, and shift management for retail stores.

Restaurant

Table management, kitchen display integration, menu modifiers, course sequencing, tip handling, and split billing.

Clinic

Appointment scheduling, patient records, insurance claim integration, prescription management, and consultation billing.

Workshop

Job card management, technician assignment, parts tracking, service stages, and customer notification workflows.

Distribution

Route-based sales, van selling, delivery tracking, return handling, and route settlement for distribution operations.

Field Sales

Mobile-first order capture, GPS tracking, customer visit logging, collection management, and offline transaction support.

Industry Templates

Pre-configured POS setups with industry-specific product categories, tax rules, payment methods, and receipt formats.

Industry KPIs

Vertical-specific dashboards with metrics like table turnover rate, average repair order value, or patient wait time.

PHASE 7

AI Productization

From embedded AI features to a productized AI agent platform

The AI Productization phase transforms SANAD's AI capabilities from embedded features within individual modules into a productized agent platform with eight specialized AI agents. Each agent is a first-class product citizen with its own persona, knowledge base, and interaction patterns — not merely a chatbot bolted onto an existing module. These agents work across module boundaries, leveraging the unified data model to provide cross-functional intelligence that no single-module AI could deliver. This phase establishes AI as a core differentiator and revenue driver for the SANAD platform.

AI Agents

Sales Agent

Lead qualification, deal coaching, pipeline analysis, and automated follow-up across CRM and ecommerce channels.

Finance Agent

Financial close assistance, anomaly detection, cash flow forecasting, and regulatory compliance guidance.

HR Agent

Resume screening, interview question generation, policy Q&A, and employee onboarding assistance.

Operations Agent

Inventory optimization, procurement recommendations, workflow automation, and operational bottleneck identification.

Executive Agent

Strategic dashboards, natural language querying, cross-functional KPI summaries, and board-ready report generation.

Analytics Agent

Ad-hoc data exploration, chart generation, trend explanation, and statistical analysis via natural language interface.

Support Agent

Ticket triage, resolution suggestions, knowledge base search, and customer communication drafting.

Knowledge Agent

Organization-wide knowledge management, document search, process guidance, and institutional memory preservation.

PHASE 8

Analytics Platform

Enterprise-grade data intelligence layer

The Analytics Platform is the capstone phase that unifies data from all SANAD modules into a comprehensive intelligence layer. Eight deliverables span the full analytics stack from data warehousing through semantic modeling to executive dashboards and AI-powered insights. This platform enables organizations to move from reactive reporting to proactive intelligence — identifying trends before they become problems, uncovering opportunities that manual analysis would miss, and delivering the right insight to the right person at the right time through natural language interactions.

Deliverables

DELIVERABLE	DESCRIPTION	BENEFIT
Enterprise Data Warehouse	Centralized analytical data store with ETL pipelines from all SANAD modules. Columnar storage optimized for query performance.	Single source of truth for all business data
Semantic Layer	Business-friendly data model that translates technical schemas into intuitive metrics, dimensions, and hierarchies.	Self-service analytics without SQL knowledge
Executive Dashboards	Pre-built C-suite dashboards covering revenue, profitability, growth, and strategic KPIs with drill-down capability.	Instant strategic visibility for decision-makers
Operational Dashboards	Real-time operational views for department managers covering sales, inventory, HR, and finance operations.	Proactive operational management
KPI Engine	Configurable KPI definitions with target tracking, threshold alerts, and trend analysis across all business dimensions.	Consistent, automated performance measurement
Forecast Engine	Statistical and ML-based forecasting for revenue, demand, cash flow, and workforce planning with confidence intervals.	Data-driven forward planning
AI Insights	Automated anomaly detection, correlation identification, and narrative explanation of significant data patterns.	Proactive intelligence without manual analysis
Natural Language Analytics	Conversational interface that translates business questions into queries and returns visualizations with explanations.	Analytics accessible to every team member

MVP-2 Scope

MVP-2 RELEASE

SANAD Enterprise Suite v1.5

The Minimum Viable Product for the second major release delivers expanded capabilities across six core domains, establishing SANAD as a competitive enterprise suite rather than a point solution. Phases 5 (Ecommerce) and 6 (POS) are deferred to v2.0 to maintain release quality and focus engineering capacity on the highest-value modules.

The MVP-2 release includes the following modules, representing the cumulative output of Phases 1 through 4 plus the AI and Analytics capabilities from Phases 7 and 8. This scope was selected based on market analysis indicating that CRM, ERP, HRM, and Accounting expansion, combined with AI assistants and analytics, represent the highest-value combination for enterprise adoption in the target market segments.

DOMAIN	PHASE	NEW MODULES	AI COMPONENT
CRM	Phase 1	10 features (Lead Scoring through AI Sales Assistant)	AI Sales Assistant
ERP	Phase 2	9 modules (Procurement through AI Procurement Assistant)	AI Procurement Assistant
HRM	Phase 3	9 modules (Recruitment ATS through AI HR Assistant)	AI HR Assistant
Accounting	Phase 4	8 modules (Advanced Reporting through AI Finance Assistant)	AI Finance Assistant
AI Agents	Phase 7	8 agents (Sales through Knowledge)	All 8 agents
Analytics	Phase 8	8 deliverables (EDW through NL Analytics)	AI Insights + NL Analytics

Exit Criteria

FDP-001 is considered complete only when all six core domain expansions are delivered, tested, and deployed to production with documented acceptance criteria satisfied. Each criterion requires not just functional completion but evidence of production readiness, including performance benchmarks, security reviews, and user acceptance testing sign-off. The exit criteria are designed to ensure that every module meets the quality standards expected of an enterprise production system, and that the integrated experience across modules delivers the unified value proposition that distinguishes SANAD from disconnected point solutions.

Each exit criterion below specifies both the functional requirement and measurable acceptance thresholds. These thresholds are calibrated to demonstrate production-grade quality while remaining achievable within the program timeline. Criteria that fall below threshold require remediation before program closure can be declared.

- ☐ **CRM Expansion Complete** — All 10 CRM features are developed, integrated with the CRM core, and passing automated regression tests. Lead Scoring Engine demonstrates at least 75% prediction accuracy on historical data. AI Sales Assistant handles at least 80% of common sales queries without human escalation. Customer 360 Profile aggregates data from at least 3 source modules (CRM, Support, Billing).
- ☐ **ERP Expansion Complete** — All 9 ERP modules are developed, integrated with inventory and accounting cores, and passing end-to-end workflow tests. Procurement Workflows support multi-level approval chains with at least 3 approval levels. Advanced Inventory Forecasting demonstrates at least 70% demand prediction accuracy over a 30-day horizon. Vendor Portal supports at least 50 concurrent vendor sessions.
- ☐ **HRM Expansion Complete** — All 9 HRM modules are developed, integrated with the employee core, and passing workflow tests. Recruitment ATS supports at least 3 job board integrations (LinkedIn, Bayt, Indeed). Performance Management supports at least 3 review cycle types (annual, quarterly, project-based). LMS tracks at least 100 course completions in testing.

- ☐ **Accounting Expansion Complete** — All 8 accounting modules are developed, integrated with the accounting core, and passing financial accuracy tests. Multi-Currency supports at least 10 currencies with automated exchange rate feeds. Consolidation supports at least 5 entities with inter-company elimination. Cash Flow Forecasting demonstrates at least 80% accuracy on 30-day projections.
- ☐ **AI Productization Complete** — At least 6 of 8 AI agents (Sales, Finance, HR, Operations, Executive, Analytics) are deployed and accessible through the SANAD interface. Each agent demonstrates at least 70% task completion rate on standard benchmarks. Agent responses are auditable and logged. Agent latency does not exceed 3 seconds for standard queries.
- ☐ **Analytics Platform Complete** — Enterprise Data Warehouse is operational with ETL pipelines from all production modules, refreshing at least every 4 hours. Executive and Operational dashboards are deployed with real-time data refresh. Natural Language Analytics handles at least 80% of standard business queries correctly. KPI Engine supports at least 50 configurable KPI definitions.

Upon verification that all six exit criteria are satisfied, the Program Governance Board convenes for formal review. Each criterion is assessed individually with evidence presented by the engineering team. The board may request additional evidence, live demonstrations, or third-party audit results for any criterion where the documented evidence is insufficient. If all criteria pass board review, the following declarations take effect immediately and are recorded in the program documentation.

These declarations mark the formal transition of SANAD from a production-ready platform to a comprehensive enterprise business suite. The closed program status indicates that all planned deliverables have been completed; the release-ready status confirms that the integrated product has passed quality gates and is approved for customer deployment. Ongoing maintenance, feature iteration, and the deferred Ecommerce and POS expansions are tracked under subsequent program IDs.

DECLARATION	VALUE
Program Status	SANAD-FDP-001 = CLOSED
Release Status	SANAD Enterprise Suite v1.5 = READY

Enterprise Suite v1.5 Ready

SANAD has evolved from a production-ready platform into a comprehensive, AI-powered enterprise business suite.

SANAD-FDP-001
